

# MEADOW ROLLERS

## Standard

- roller scraper with smooth adjustment
- support foot
- single-point hitch
- flood-drain plugs
- one- or two-piece roller
- water regulated weight
- varnish coating with improved parameters

rigid frame,  
trailed  
2,5 | 2,75 m

## Options

braked  
CHASSIS

unbraked  
CHASSIS

roller brake  
HYDRAULIC

## About the machine

One- or two-piece meadow rollers, the weight of which is regulated by the amount of water filling the roller. The wall thickness of the machine is 12 mm and the diameter is 1016 or 1220 mm. Working width 2.5 or 2.75 m. Each roller can be equipped with a chassis with a braked or unbraked axle and individual hydraulic brakes. MORS has been used in the care of meadows and pastures, at football stadiums, golf courses in the establishment and production of lawns. During rolling, the top layer of the soil is pressed down and water infiltration increases, the development of beneficial soil microflora and the decomposition of organic matter is accelerated.
